Edition 04/2022  
Document Number D0002171en Rev. B

## OpenLab CDS – Basic Information

### Terms

<b>ACQUISITION METHOD</b>	Includes the instrument settings for an experiment. Edited in <b>Acquisition</b> .
<b>AUDIT TRAIL</b>	A representation of changes to a record that includes 1) identity of the user who made the change, 2) date/time of the change, 3) description of the change, and 4) reason for the change. Configure audit trails in <b>OpenLab Control Panel</b> .
<b>LAYOUTS</b>	Defines how and which information is displayed. Use preset <b>Layouts</b> or customize your personal layout.  Changes in layouts are saved per user. Use  <b>Reset</b> function to return to default layouts.
<b>LINKED METHOD</b>	Processing method that is assigned to an injection.
<b>PROCESSING METHOD</b>	Contains the information and parameters needed to process the data and generate results. Edited in <b>Data Analysis</b> .
<b>PROJECT</b>	Use to organize your data, e.g. by instrument, laboratory, or study. Apply individual access rights to each project
<b>REPORT TEMPLATE</b>	Defines the layout of a report. Edited in <b>Data Analysis</b> .
<b>RESULT SET</b>	Collection of raw data, methods, and injection list. Create custom result sets by combining single samples or sequence injections, and reprocess together.
<b>SEQUENCE CREATION TEMPLATE</b>	Defines a flexible pattern for creating new sequences. Useful for creating cyclic sequence. Edited in <b>Acquisition</b> .
<b>SEQUENCE TABLE</b>	Identifies the order of runs to be included in a sequence. Edited in <b>Acquisition</b> .

### Help and Learning

#### GETTING STARTED - OPENLAB HELP AND LEARNING

The interactive **e-Introduction** modules provide step-by-step instructions on basic workflows and help you to get familiar with OpenLab CDS. Access the modules from the desktop by clicking one of the **OpenLab Help and Learning** icons.

Use **F1** to get **context sensitive help**.

Check Help and Learning Online for the latest localized versions of manuals and modules at <https://openlab.help.agilent.com>

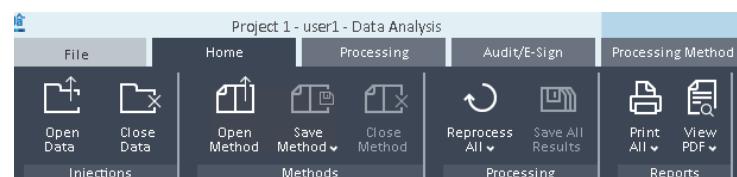

#### AGILENT COMMUNITY

<https://community.agilent.com>

Collaborate with others about applications, discuss Agilent products, and find in-depth documents and videos relevant to Agilent.

### MENU COMMANDS

Find commands in the ribbon. **Data Analysis**: contextual ribbon tabs (highlighted in blue) offer commands for the selected window.

### Prepare, Install, Configure

#### Prepare:

Run the System Preparation tool, and check the Requirements guide for hardware, software and network requirements.

#### Install, configure:

Click **setup.exe** on the USB stick to run the installation wizard.

# OpenLab CDS – Quick Reference Sheet

Access Instruments and Projects	Acquire Data	Analyze and Report Data
<b>CONTROL PANEL</b> Use the Desktop icon to launch OpenLab Control Panel.	<b>CREATE ACQUISITION METHOD</b> Define acquisition and instrument parameters for runs using this method. Download to instrument to use new parameters immediately.	<b>REVIEW DATA</b> ■ To load data, double-click node in the <b>Data Selection</b> view ■ ⌘ Pin injections or result sets for comparison ■ Use <b>Peak Explorer</b> to view a sequence at a glance and identify trends or artifacts. ■ Create custom result sets based on existing injections (right-click nodes in the injection tree to add them, click <b>Create new Result Set</b> in the ribbon). ■ Use the <b>Integration Optimizer</b> to quickly adjust peak baselines.
<b>MANAGE USERS</b> <b>ROLE: SYSTEM ADMIN</b> <ul style="list-style-type: none"><li>■ Assign users to groups</li><li>■ Assign roles to groups</li><li>■ Use default roles or assign privileges to roles</li><li>■ Use role <b>Chemist</b> for Acquisition and Data Analysis)</li><li>■ Edit security policy</li><li>■ Manage licenses</li></ul>	<b>RUN A SINGLE SAMPLE</b> ■ Enter sample parameters ■ Include acquisition method and (optional) processing method ■ Run	<b>INJECTIONS AND PROCESSING METHODS</b> A processing method may already be linked (assigned) to the data. If not, create new master method Link injections to the master processing method A result set method (stored in result set folder) is generated on linking the master method to the injections. Reprocess (automatic after linking, or manually)
<b>PROJECTS</b> <b>ROLE: PROJECT ADMIN</b> Create projects to organize your data: <ul style="list-style-type: none"><li>■ Activate method audit trails</li><li>■ Apply project-specific options</li><li>■ Add custom parameters for samples and compounds</li></ul>	<b>RUN A SEQUENCE</b> ■ Create a new sequence ■ Open and edit a previously saved sequence ■ Import sequence from a result set or a CSV file (also possible via drag and drop) ■ Click <b>Apply Template</b> to apply a sequence creation template	<b>EDIT PROCESSING METHOD</b> Processing methods are divided in sections: e.g. <ul style="list-style-type: none"><li>■ <b>Integration Events</b> for all or for specific signals</li><li>■ <b>Compounds</b>: Add compounds: Right-click a peak, or right-click the compound table.</li><li>■ <b>Calibration</b>: Set number of calibration levels in the <b>General</b> tab</li><li>■ <b>Spectra</b>: MS or UV reference spectra for confirmation or purity checks</li><li>■ <b>Extraction &gt; Spectrum</b>: Background correction settings</li><li>■ <b>Tools &gt; Custom Calculation</b>: Extend default calculations</li></ul>
<b>INSTRUMENTS</b> <b>ROLE: INSTRUMENT ADMIN</b> Create and configure instruments Monitor instruments	<b>SEQUENCE CREATION TEMPLATE</b> Create a new template in the <b>Sequence Creation Template</b> window: 	<b>REPORT AND PRINT</b> ■ Import default templates into your project (start customizing templates from here); ■ <b>Data Selection &gt; Import Default Templates</b> ■ <b>Print results manually</b> : In Data Analysis, edit the processing method <b>Reports</b> section, and link the method. Click <b>Print all</b> in the ribbon. <b>Print processing method</b> : Go to <b>Data Processing &gt; File</b> ribbon tab > <b>Print Method</b> <b>Print Individual PDF</b> : Go to <b>Reporting &gt; Preview &gt; Save as PDF</b> Sequence summary report: submenu <b>Save result set summary report</b>
<b>STATUS</b> Create shortcut for acquisition with an instrument.	<b>LAUNCH DATA ANALYSIS</b> Click icon in the <b>History</b> tab of the <b>Run Queue</b> to review completed single injections or sequences in Data Analysis.	 Launch Acquisition for an instrument.  View Run Queue, Instrument status, Online signals  <b>Print</b>
